Light emitting diode Wikipedia

A light emitting diode LED is a semiconductor light source that emits light when current flows through it Electrons in the semiconductor recombine with electron holes releasing energy in the form of photons This effect is called electroluminescence The color of the light corresponding to the energy of the photons is determined by the energy required for electrons to cross the band gap

Homeschool Services Scholars Online Classical Christian

Looking at Middle earth Based on the books not the movies this course considers many facets of J R R Tolkien's mythic creation especially as embodied in The Hobbit and The Lord of the Rings Acquaintance with The Silmarillion or the multi volume History of Middle earth won't go amiss but is not required In a fairly free and unpressured context we look at Tolkien's world

AHRO SLACspeak Glossary of SLAC terms

0 9 1 ab Inverse attobarns An inverse attobarn corresponds to one billion pairs of particles ex one billion pairs of B and anti B particles produced at SLAC by the PEP II accelerator

Quantum Materials Corporation QTMM Board InvestorsHub

a Within 60 days of execution of this agreement licensee will provide proof of funding in the amount of Twenty million U S dollars 20 000 000 00 for this project

Flash sintering of ceramics ScienceDirect

The mechanism of the hot spot formation is clearly related to the conduction behavior of the ceramic specimen It is based on the fact that a local breakdown takes place where the material is hotter it becomes also more conductive and this increases the local current density and power dissipation
